罗Title: EP0741112B1: Water aerator[German][French]

Water aerator slotted rubber membrane has hook-shaped edge -Derwent Title:

gripping rigid base plate to facilitate easy insertion and removal of the

baseplate for cleaning and maintenance [Derwent Record]

> [From equivalent <u>EP0741112A2</u>] Water aerator slotted rubber Abstract:

> > membrane has hook-shaped edge A water aerator discharge head with a rigid baseplate (1) is approximately horizontal during operation and has a flat upper face incorporating one or more air passages. The rigid plate (1) is covered by a rubber membrane (5) incorporating numerous fine slits, and which is held in place at the periphery. Air passes between the rigid plate and rubber membrane thereby enlarging and emerging through the slits. The novelty is that the rubber membrane (5) thickened edge (8) is hook-shaped and completely surrounds the rigid baseplate (1) angled edge. The hook section rubber edge is much thicker in the lower section, than in the

slotted membrane section.

1. Water aerator, having a rigid retaining plate (1), which is disposed substantially horizontally when in the operative position, has a substantially flat upper surface and includes at least one opening, and said aerator having a resilient plate (5), which is formed from rubber or the like, is disposed on the retaining plate (1), is sealingly mounted by its edge on a downwardly bent edge (3) of the retaining plate (1) and is provided with a plurality of fine slits (7), the air being introducible between the retaining plate (1) and the resilient plate (5) and widening the slits (7), and the edge (8) of the retaining plate (1) in a hook-like manner, characterised in that a rigid ring (19) is mounted on the underside of the retaining plate (1) preferably by means of screws (20), and said ring damps the hook-like edge (8) or parts (26) thereof between it and the main plate (1). [German] [French]

Description Expand description

Die Erfindung betrifft einen Wasserbelüfter mit einer steifen Halteplatte, die in der Betriebsstellung im wesentlichen waagerecht angeordnet ist, an ihrer Oberseite praktisch eben ist und die mindestens eine Durchbrechung aufweist, und mit einer elastischen Platte aus Gummi od. dgl., die auf der Halteplatte angeordnet, mit ihrem Rand dichtend an dem nach unten abgewinkelten Rand der Halteplatte befestigt und mit einer Vielzahl feiner Schlitze versehen ist, wobei die Luft zwischen der Halteplatte und der elastischen Platte einleitbar ist und die Schlitze aufweitet, und wobei der Rand der elastischen Platte den nach unten abgewinkelten Rand der Halteplatte hakenartig umschließt.
